

## Public Announcement: SupHerb Co. Announces a Recall

In the notice published on the 17.12.2020, an error has occurred in the batch number (the number included the letters SU when it should have been S only). The correct batch numbers are those listed in this notice, which replaces the one from the 17.12.2020

SupHerb announces that in a test performed as part of the internal quality assurance system of the factory, *Pseudomonas aeruginosa* has been found in some of the bottles of the dietary supplement – Aloe Vera Drink from the following batches:

200801S7312 and 200802S7312, best before: 08.2023

Barcode: 7290014545694

The bacteria *Pseudomonas aeruginosa* might harm primarily persons with a weakened immune system.

We are currently working to recall the products, and are asking consumers who have purchased the product, from the aforementioned batches only, not to consume the product and to contact the company's customer service (\*2535) in order to return the product and receive a replacement / full refund. Addressing the matter is done in coordination with the Food Service at the Ministry of Health.

It is important to note that you may continue using the Aloe Vera Drink products with batch numbers others than the ones mentioned.

To be clear, this does not apply to the company's other products, which may keep on being consumed without fear.
